

Business Continuity Procedure

Document ID: DOC-005

Document Type: Procedure

Version: 1.0

Effective Date: 2026-01-01

Status: Active

Purpose

This procedure supports continued delivery of critical operational services during disruption.

Disruption may include infrastructure failure, digital outage, severe weather, workforce shortage, supply disruption or loss of access to facilities.

Managers should identify affected critical services, assess available resources, activate appropriate continuity arrangements and establish clear operational communication.

Priority should be given to maintaining essential services, protecting safety, restoring normal operations and escalating unresolved risks.

Continuity actions and major decisions should be documented and reviewed until normal service arrangements are restored.
