

Infection Surge Operational Response Plan

Document ID: DOC-010

Version: 1.0

Effective Date: 2026-01-01

Status: Active

Page: 1

Operational Impact of Infection Surge

An infection surge may create operational pressure through increased demand, staff absence, isolation requirements, reduced bed flexibility and disruption to normal patient flow.

Operational teams should assess the combined effect on bed capacity, workforce resilience and service continuity.

This document addresses operational coordination and does not provide clinical diagnosis or treatment guidance.

Escalation and Coordination

Where infection-related operational pressure increases, leadership should coordinate capacity planning, workforce actions, patient flow and business continuity measures.

Operational decisions should use current organisational guidance and should be reviewed as demand or staffing conditions change.

Clinical decisions remain outside the scope of this operational response plan.
